

Agent Based Workflows via Dungeons and Dragons

Alexander C. Mueller

June 2024

Agenda

Chaos from AI

- Literary magazines are closing submissions
- Hard to find good travel guides
- Amazon plays both sides

The snowflake method

- What is it and why does it fit with AI?
- Structure of a novel
- Some basic step-by-step

Problems with travel guides on Amazon

I want to give a presentation on generative AI to the tavern.

12:04

Tavern Keeper: Grog, the Dwarf, steps up onto a platform in the tavern, a look of determination on his face as he begins his presentation to the patrons.

Grog: "Greetings, my fellow patrons! Today, I bring you a tale of magic and wonder, a tale of Generative AI. This powerful tool has the ability to create stories, art, music, and even write just a few lines of code."

He goes on to explain the basic concepts of generative AI, its applications in various fields, and the potential impact it can have on the world.

As Grog shares his knowledge with the eager audience, the tavern becomes filled with curiosity and excitement. The patrons listen intently, asking questions and engaging in discussions about the fascinating technology.

After his presentation, Grog is met with applause and cheers from the inspired crowd. The tavern is abuzz with chatter about generative AI, and the patrons are inspired by the possibilities it holds.

As the evening unfolds, discussions about AI, magic, and innovation fill the tavern, creating an atmosphere of intellectual curiosity and creativity. Grog's presentation has sparked new ideas and conversations among the patrons, leaving them with a sense of wonder and inspiration.

It is difficult to find good travel advice right now...

- Amazon is flooded with fake travel guides
- Amazon is also flooded with fake positive reviews
